
NOAA 200th Celebration - Boulder, CO

Please join us in celebrating the National Oceanic and Atmospheric Administration's 200 years of *Science, Service, and Stewardship* that began in 1807 when President Thomas Jefferson established the Survey of the Coasts. Today, our Nation relies on NOAA for weather warnings that save lives, protection and management of ocean and coastal resources, and world-class research to better understand and predict the Earth system now and in the future.

You are invited to a ceremony to commemorate NOAA's legacy of 200 years, including a history in Boulder dating back to 1950:

Friday, Nov. 9, 2007
9:30 a.m.
David Skaggs Research Center
325 Broadway, Boulder, CO

Mr. Timothy R. Keeney, Deputy Assistant Secretary of Commerce for Oceans and Atmosphere, and Boulder Mayor Mark Ruzzin will unveil a commemorative marker set by NOAA's National Geodetic Survey in a garden near the front entrance to the NOAA building.

Following the ceremony, take a self-guided *Tour of NOAA Across Time, Space, and Diverse Disciplines* -- a Science Showcase featuring weather briefings, a glimpse of past climates, a look at NOAA's global air-sampling network, a tour of the Space Weather Prediction Center, and a viewing of NOAA's unique 3D screen showing Earth system and planetary data – Science on a Sphere®.

With questions, please call 303-497-6000.
